github.com/TolongLabs/Perch

THE PROBLEM

One message. Four places. No plan.

CodeNecton’s brief calls it “scattered across five different apps and a group chat.” Four places everyone said yes to. Yet someone has to do all the planning.

ONE TUESDAY IN THE GROUP CHAT

“ok so Sensoji, Meiji Jingu and teamLab yes? and Ameyoko if we have time”

THE GROUP

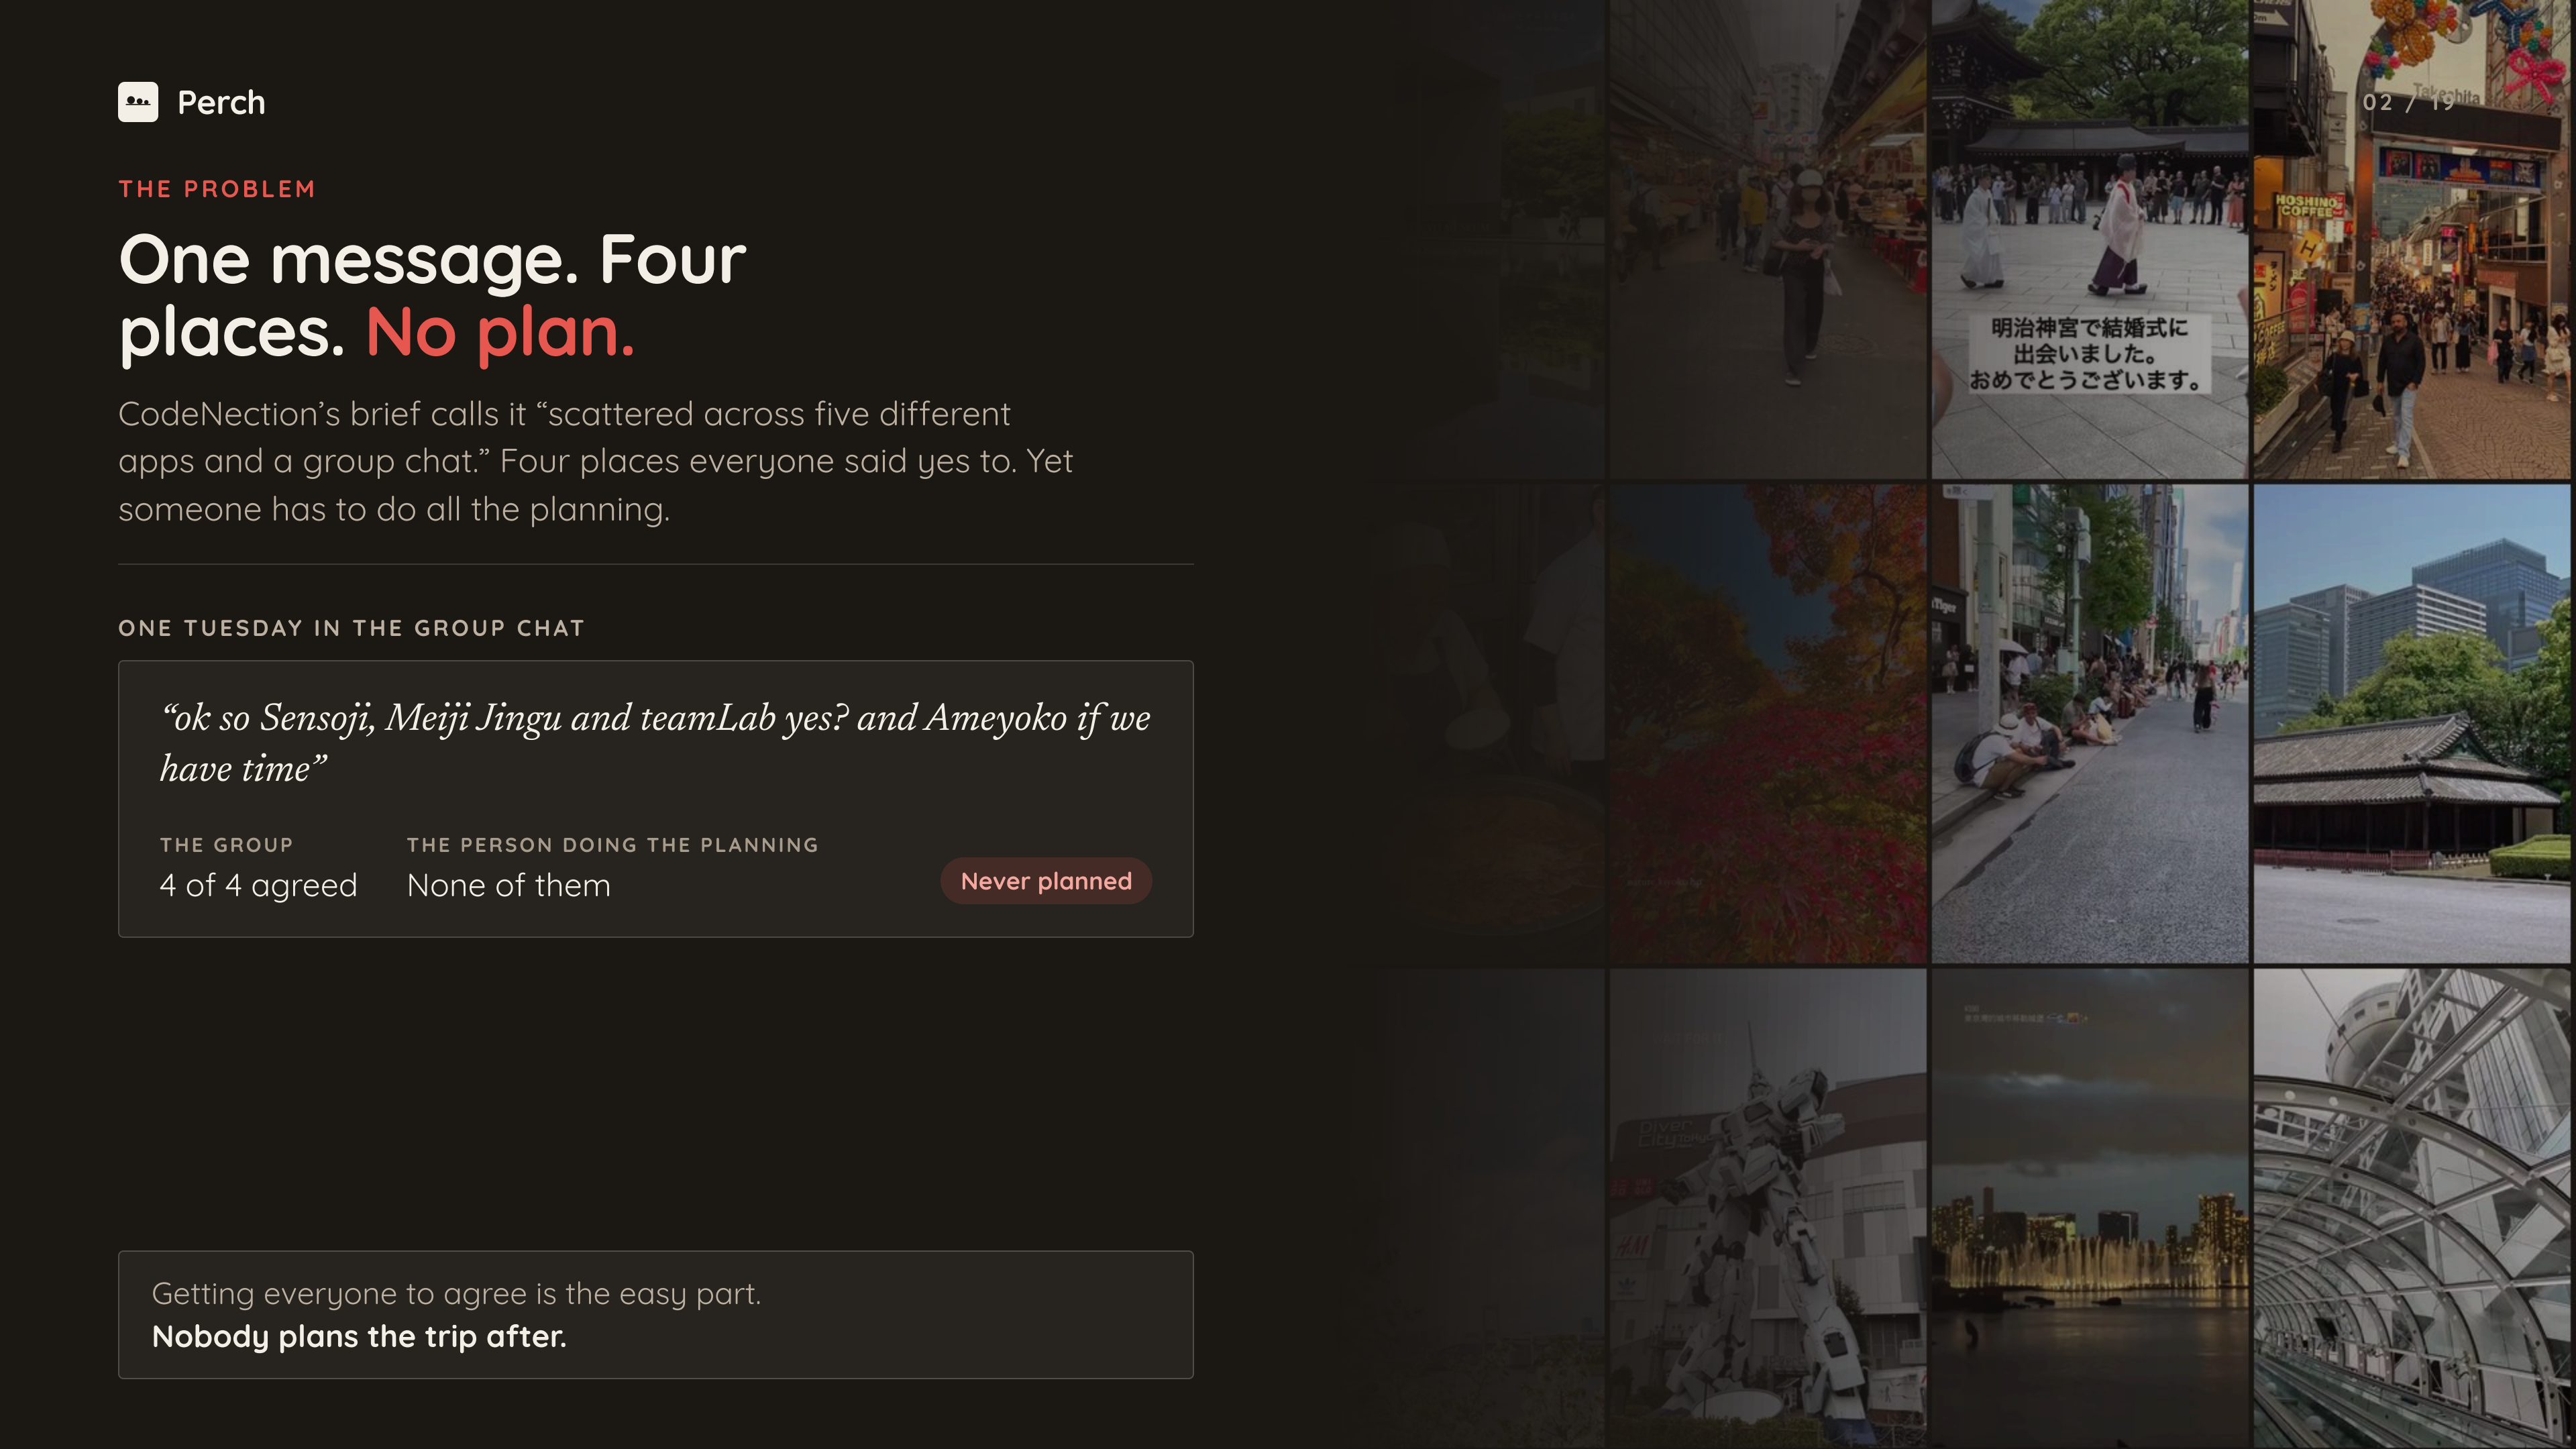

4 of 4 agreed

THE PERSON DOING THE PLANNING

None of them

Never planned

Getting everyone to agree is the easy part.
Nobody plans the trip after.

Four Causes. Three Are Already Solved.

We are not competing with travel planners. We are competing with the five free apps the group already has.

CODENECTION’S BRIEF, VERBATIM

“Planning a trip means dealing with flights, places to stay, budgets, activities, and whatever everyone in the group actually wants ... it usually ends up scattered across five different apps and a group chat.”

THE FOUR CAUSES UNDERNEATH IT, AND WHO ALREADY SERVES EACH

Producing a plausible itinerary is slow	Chatbots commoditised it.	Solved
The plan lives in five places at once	Wanderlog puts the map and the itinerary together.	Solved
Getting the group to agree on places	WhatsApp ships polls. Swipe apps produce a result.	Solved
Turning those votes into a day-by-day schedule with costs	The plan stays a screenshot: it cannot be reordered, costed or printed.	Served by nobody

One Person Carries The Whole Trip

The organiser does four jobs nobody assigned her. The other three do none.

THE ORGANISER

Aisyah, 24

Junior job in KL, no car. Tokyo, four days and three nights, one day of annual leave tagged onto a weekend.

Every claim about her is marked assumed in docs/research. None of it comes from an interview.

WHEN SHE OPENS IT

The Tuesday nobody follows up the group chat, and midnight on the Thursday before the trip, re-checking opening hours by hand.

WHAT SHE CARRIES TODAY

- Reading the whole chat
- Deciding for everyone
- Chasing four people
- Fronting the deposit

THE OTHER THREE

- Farah

Different shift
- Hana

Different job
- Iman

Installs nothing

WHAT THEY CARRY

Nothing, which is the problem. **No stake means no reply**, so the whole trip sits on one person until she gives up or overrules everyone.

She is the only one who has to open a second app. **Perch asks the other three for two minutes and nothing else.**

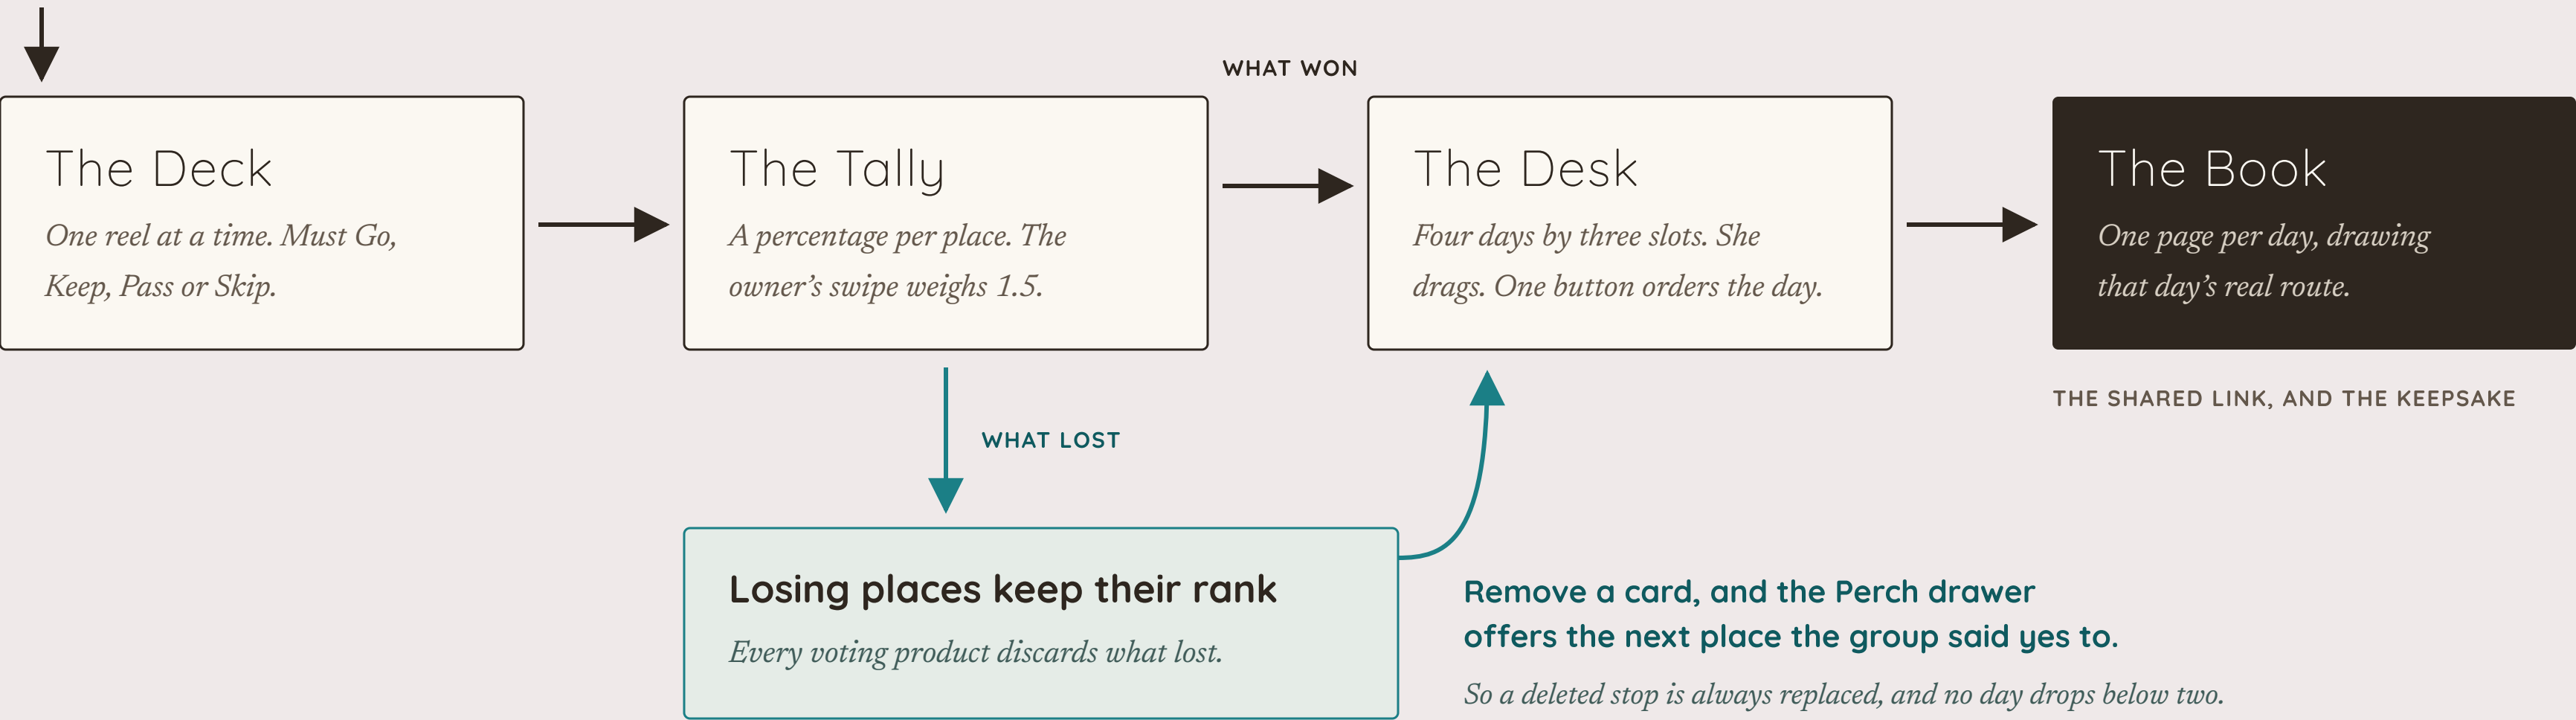

WHO WE ARE NOT BUILDING FOR

- ~~“Students”, as a category~~
- ~~Families with young children~~
- ~~Backpackers with weeks of slack~~
- ~~Agent-booked trips~~

One Swipe Builds The Tally, The Calendar And The Book

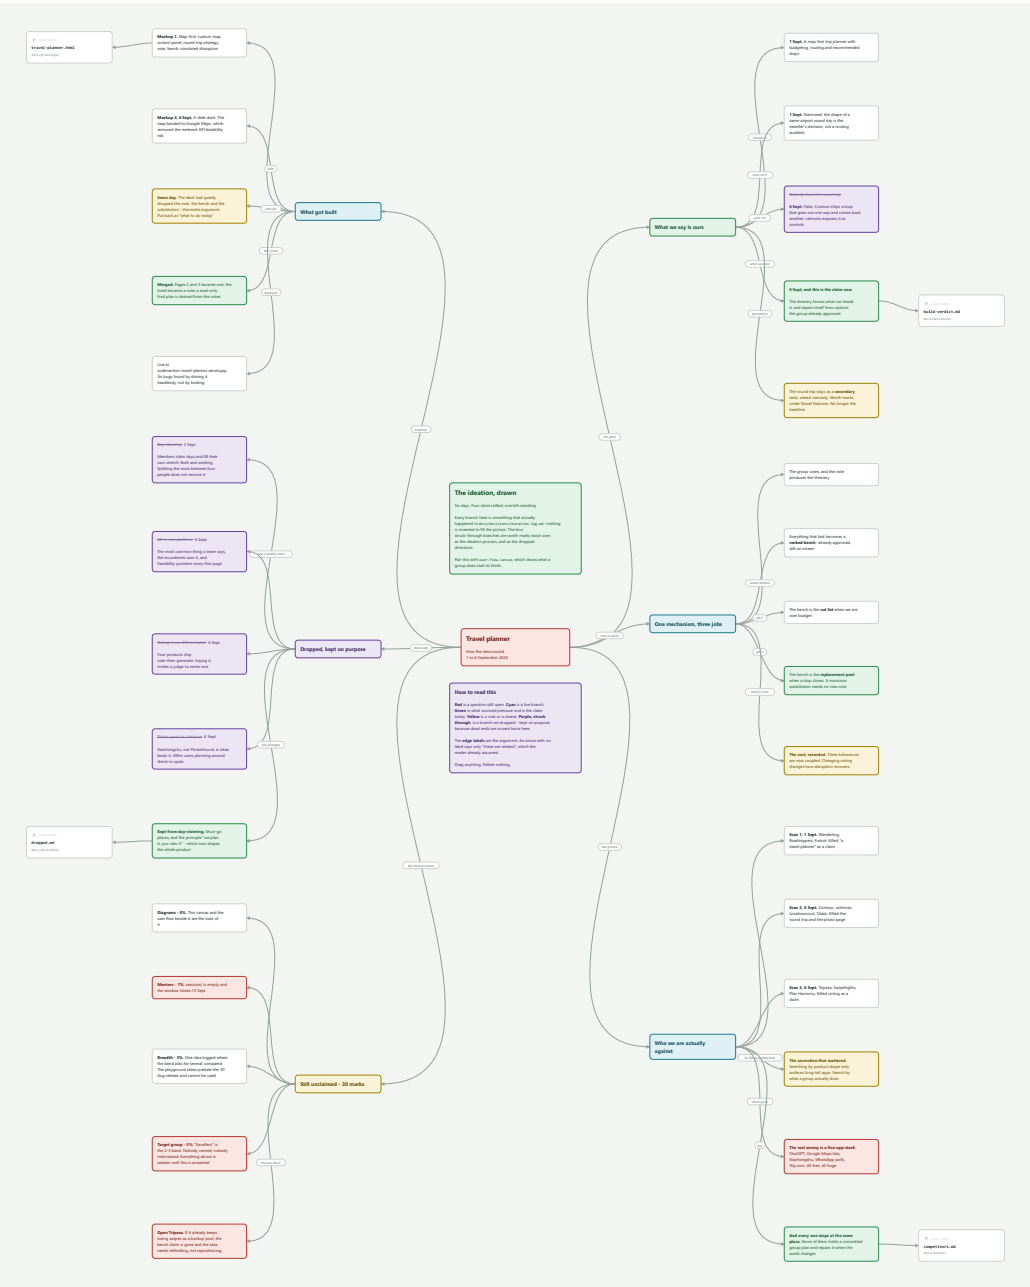

The group swipes. The organiser drags. Nobody types anything.

THE INVITE LINK OPENS HERE. NO ACCOUNT, NO INSTALL

Six Days Of Ideation, On One Canvas

One Obsidian Canvas from 6 September, exported unedited.

WHAT THE MAP RECORDS

Six days

1 to 6 September, one branch a day

Three scans

Three passes over the market. None killed the swipe-to-calendar chain

Eleven dropped

Every dead end kept, with the day it stopped

Two live

The swipe and the book. Both shipped.

EVERY COLOUR MEANS SOMETHING

● A question still open

● A live branch

● Survived pressure, and is the claim

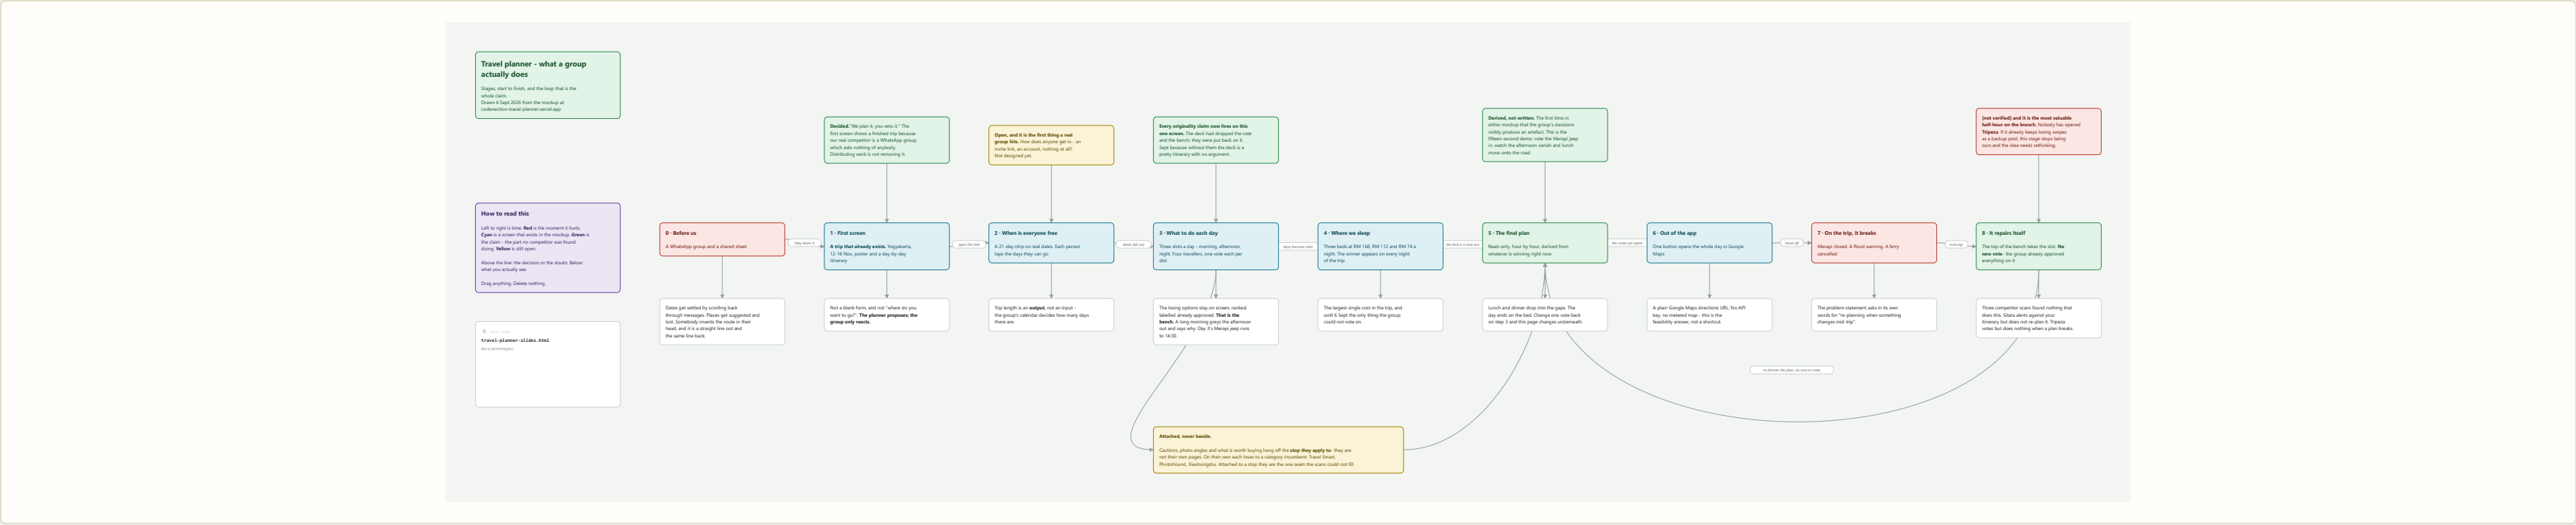

● A cost or a caveat

● Dropped, and kept on purpose

Full size, with the user flow beside it, in the README at **2.2 Ideation Boards**.

From Group Chat To Trip, In Nine Steps

Nine steps from a group chat to a printed trip, and the drawing they came from.

NINE STEPS, AND EIGHT OF THEM ARE SCREENS IN THE BUILD

0 Before us A group chat and a shared sheet	1 The landing The one screen before anyone commits	2 Your trips The trip, and the link that invites the group	3 Plan a new trip Dates, who is coming, what you are after	4 The Deck Must Go, Keep, Pass or Skip on each place	5 The Tally A percentage per place, the owner's answer weighs 1.5	6 The Desk Drag what won onto days, three slots each	7 Before we go The checklist the trip derives for itself	8 The Book A page a day on a real map, and the Manual
---	--	--	--	--	---	--	--	---

The drawing is 6 September, before the rebuild, and the cards are what shipped. Two of its stages are not in the build: voting on where to sleep, and an itinerary that repairs itself after a disruption. Both are in the README's dropped table at 2.1, with the date each stopped being live.

Thirteen Ideas. Two Survived.

Every one is dated and names what killed it. The full table is in the README, 2.1.

52

dated entries in the iteration log,
1 to 7 September

13

directions we recorded and
dated

2

still live on 8 September, and
both are in the prototype

STILL LIVE · CHOSEN 6 SEPTEMBER

Swipe on reels, drag what won

The group’s decision reaches a printed book untouched, and nothing is typed on the way.

Now: The Deck, The Tally and The Desk.

STILL LIVE · CHOSEN 6 SEPTEMBER

The trip as a book, read-only

A keepsake has to be a finished thing, so it shows printed state and takes no input.

Now: The Book, and the Manual beside it.

ELEVEN DROPPED, WITH THE DAY EACH STOPPED BEING LIVE

- Split planning 2 Sept
- Map-first planner 6 Sept
- Group voting as the claim 6 Sept
- All-in-one platform 6 Sept
- Photo spots 6 Sept
- One book in two states 6 Sept
- A chat panel 6 Sept
- The self-repairing itinerary 8 Sept
- The interview instead of a form 8 Sept
- Bill splitting 8 Sept
- A mascot copilot 8 Sept

Two of thirteen shipped. **Nothing was deleted** — the other eleven keep their entry, their date, and the quote that killed them.

Two We Built, Then Killed

Both worked when they were dropped. One of them demoed better than the thing that replaced it.

DROPPED 2 SEPTEMBER, WHILE IT WAS BUILT AND WORKING

~~Split Planning~~

“do you think this feature is needed since we are a trip planner we should have done everything”

JIN SIANG, MID-BUILD

WHY IT DIED

Splitting the work between four people does not remove the work, it distributes it.

WHAT IT COST US

One of only two genuinely novel things in the idea, dropped on purpose on 2 September.

DROPPED 6 SEPTEMBER, WHILE IT WAS BUILT AND WORKING

~~One Book In Two States~~

“It demoed better and still lost.”

RESEARCH/DECISIONS/DROPPED.MD

WHY IT DIED

A flipbook is built for reading. Hosting vote buttons inside one is fighting the page.

WHAT SURVIVED IT

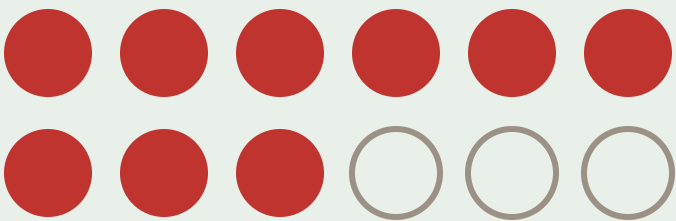

The drawer slides up when a card is removed. It is the Perch drawer now.

One Session. Four Things Changed.

“All these features right, like one to six, is stuff that people will already build.”

ZACH KHONG, FULL STACK ENGINEER AT SOLANA FOUNDATION
38 MINUTES, TRANSCRIBED VERBATIM WITH TIMESTAMPS

TEAMS HE MENTORED, AND WHAT THEY WERE BUILDING

Nine of twelve were building a travel planner.
Ours was one of them.

“the way that how you represent the voting feature is what would make your app special”

WHAT HE SAID

“actively thinking is harder than just deciding yes or no”

~~A ranked interview~~

WHAT CHANGED BECAUSE OF IT

Four answers on a reel

“I have to click a lot and I have to know what I want”

~~Forms and choice chips~~

Free text first, chips under it

“I feel like the voting part is a bit stiff”

~~A 50-50 split with no answer~~

The owner’s swipe weighs 1.5

“you could plan to that level of cultural detail”

~~A generic international planner~~

One city, transit modelled

WHAT HE PROPOSED, AND HOW FAR WE TOOK IT

“voting doesn’t have to be yes or no. You could be like, oh, I like this place like maybe 65 percent”

Taken as far as four steps, not a percentage. Must Go, Keep, Pass and Skip ship; a Must Go outranks a Keep without inflating the tally.

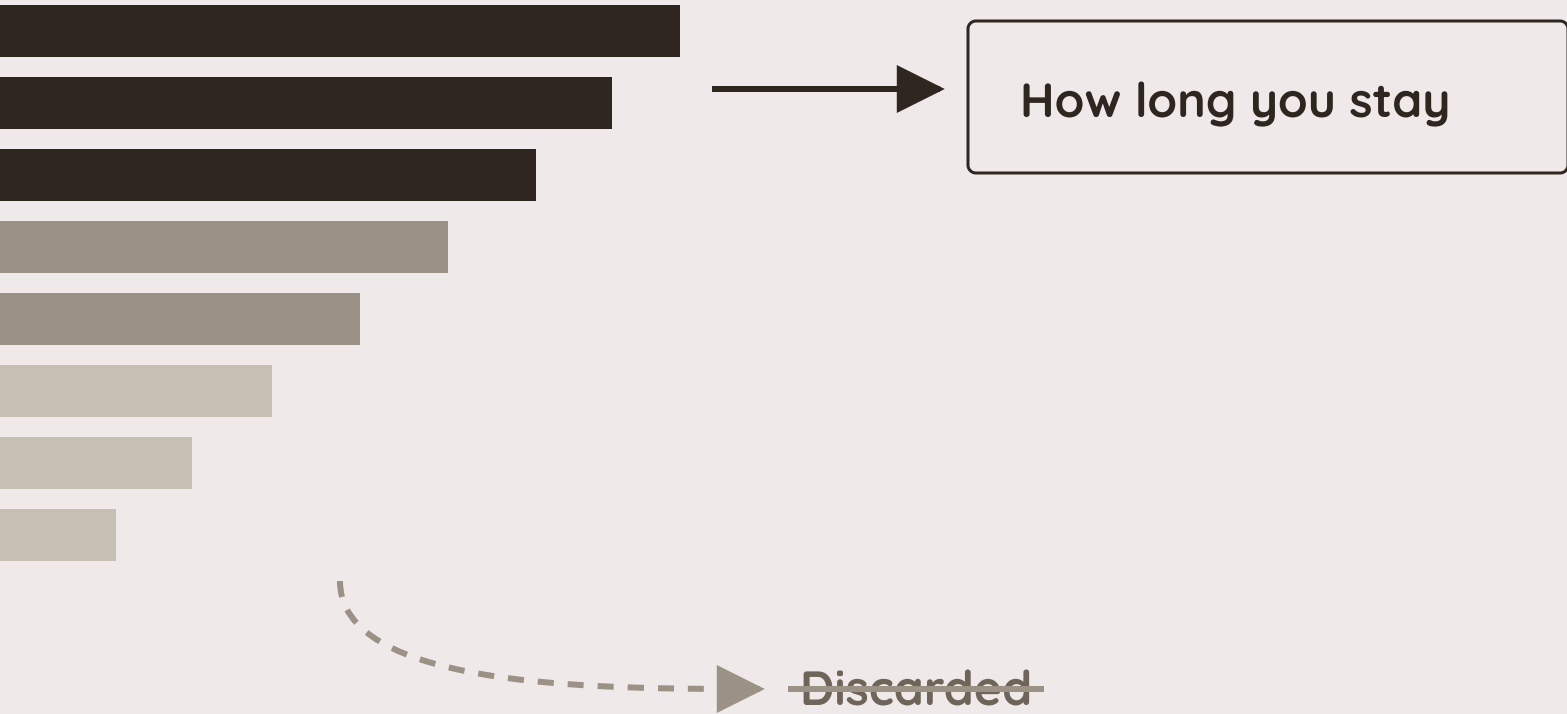

A group chat read by a machine, and drawing on a map, are in the transcript too. Neither was adopted.

Everyone Collects The Votes. We Use The Losing Ones Too.

A direct competitor had the same ranking in its hands and spent it on a different problem.

SWIPESIGHTS, READ DIRECTLY ON 7 SEPTEMBER

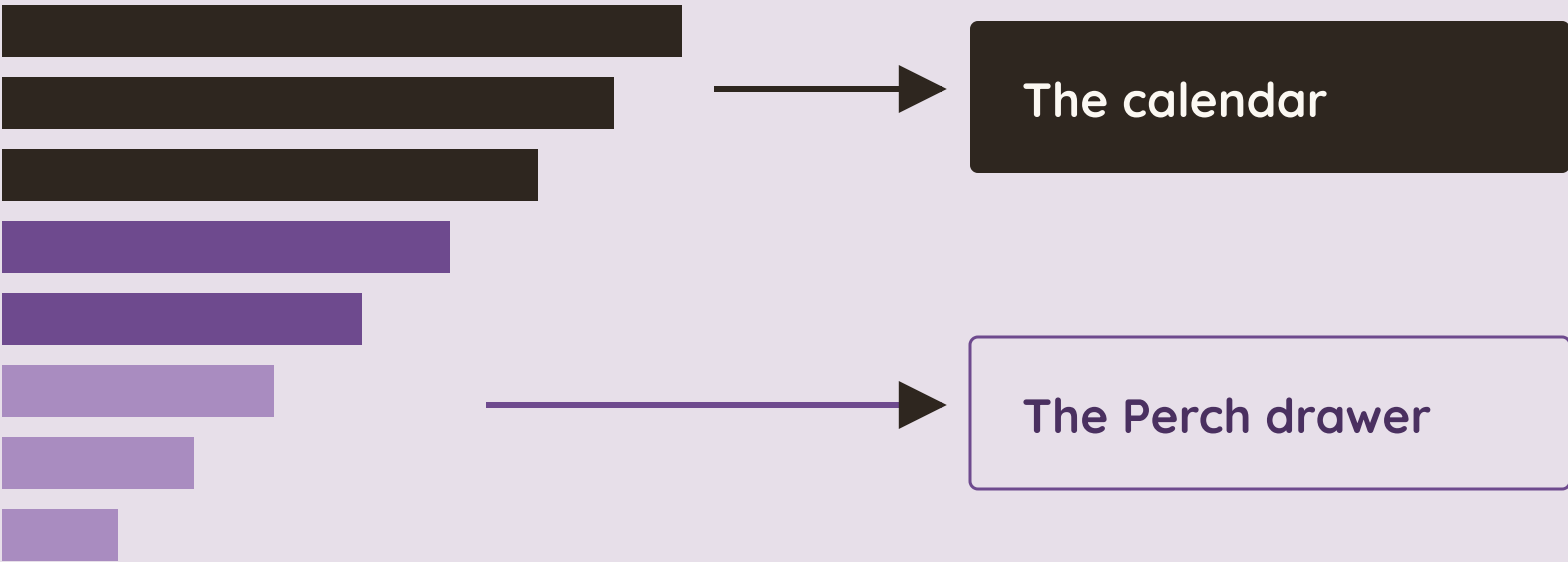

A ranked group preference order

Its own FAQ tells the group to “double-check opening hours closer to your trip date.”

PERCH

The same ranked order

Spent twice, and both spends are visible.

*The tally is the only input to the scheduler.
Nothing else is asked of anyone.*

Four Apps Can Collect Preferences. None Can Schedule Them.

Three planners, and the two free apps that are the actual competition.

	WANDERLOG	ROADTRIPPERS	SWIPESIGHTS	GOOGLE MAPS AND WHATSAPP	PERCH
Builds an itinerary	☒	☒	☒	☐	☒
Combines group preferences	☐	☐	☒	☒	☒
Keeps the losing preferences	☐	☐	☐	☐	☒
Puts the votes on specific days, in order	☐	☐	☐	☐	☒
Colours each day green, gold or red	☐	☐	☐	☐	☒
Works with no account and no install	☐	☐	☐	☒	☒

☒ FILLED, IT DOES THIS

☒ HALF, A POLL ONLY

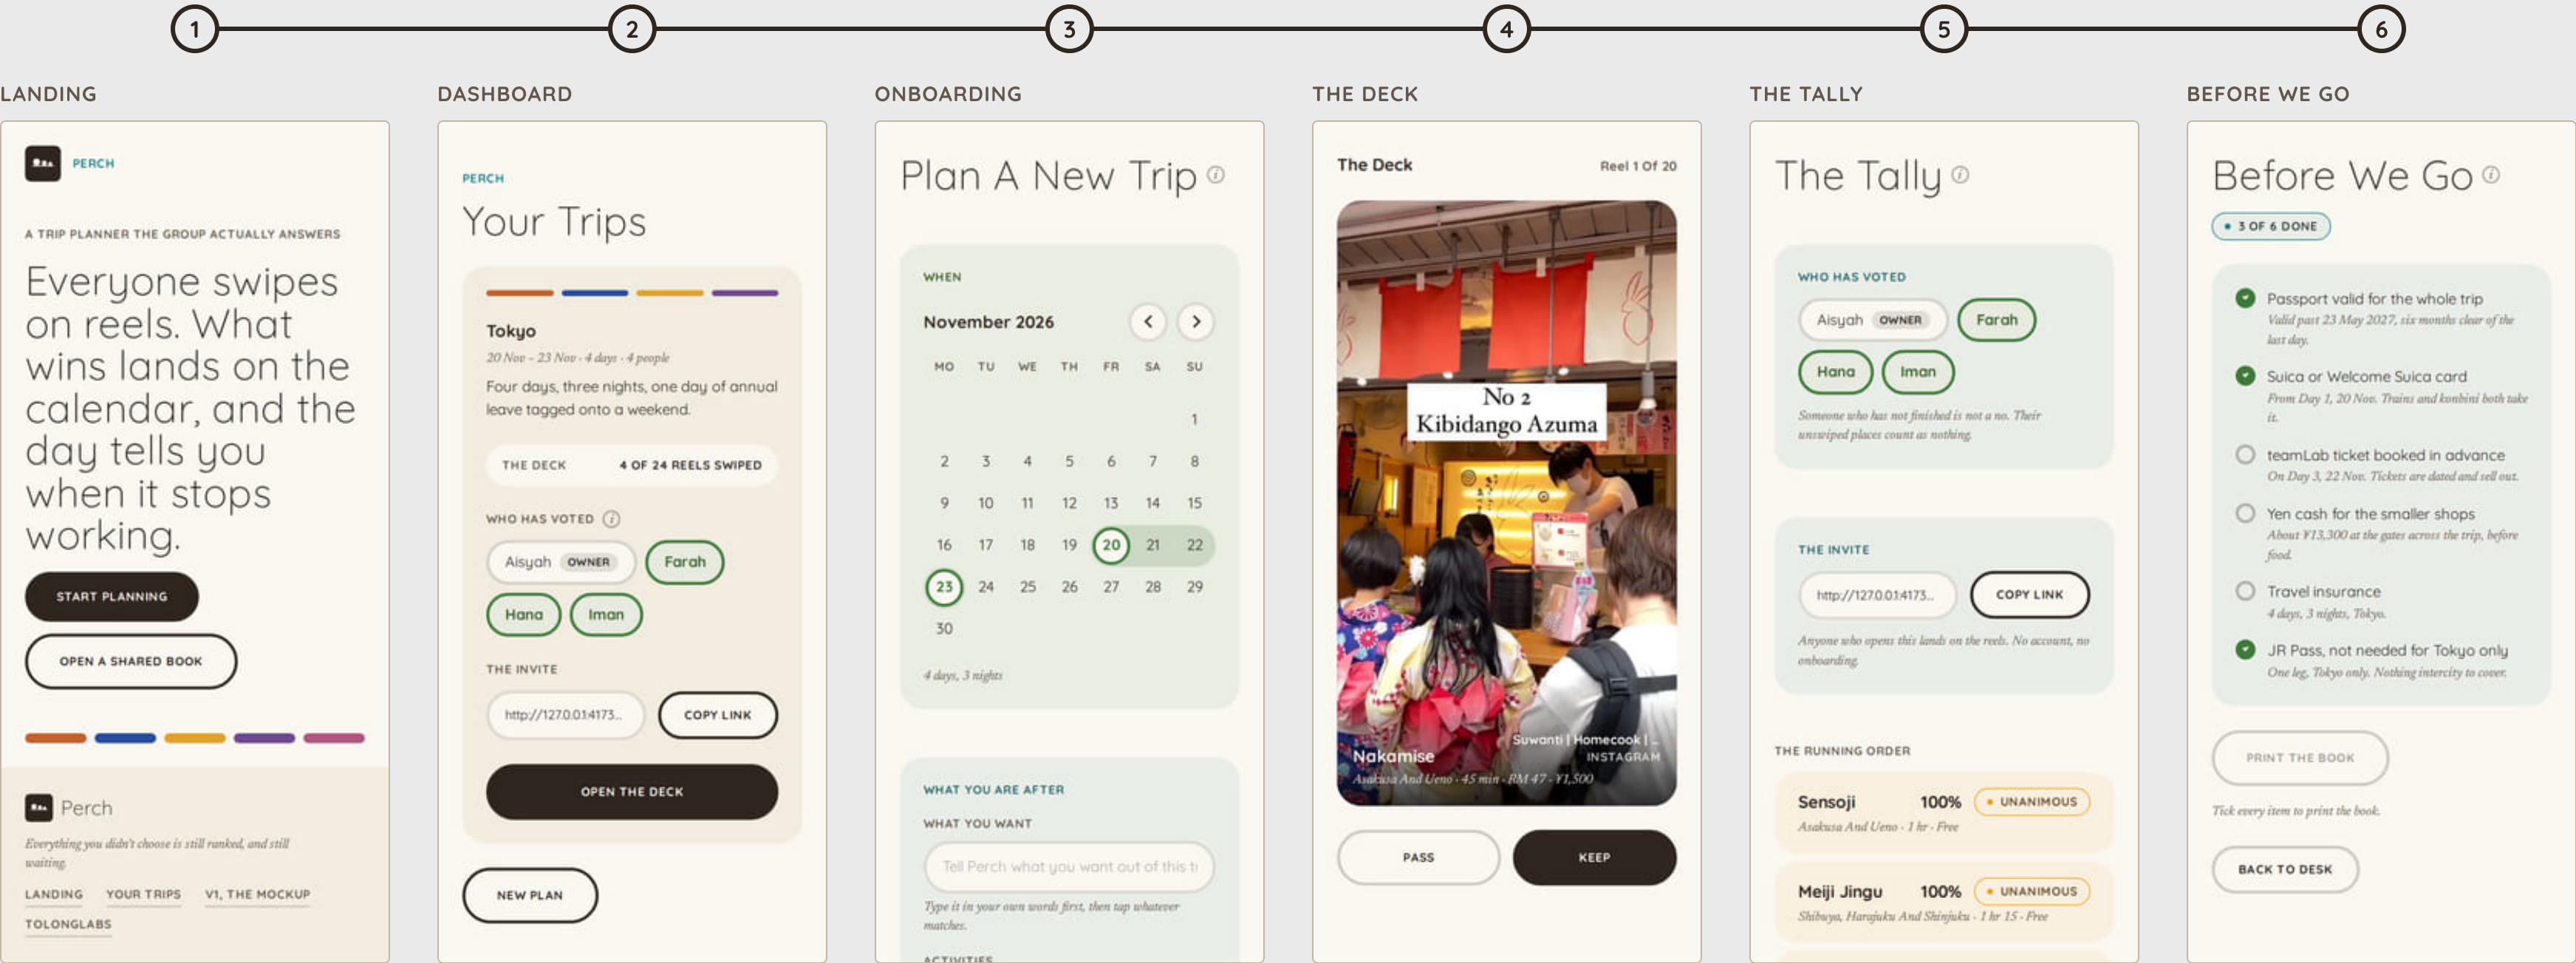

☐ OPEN, IT DOES NOT

☒ WHAT WE HAVE NOT CHECKED

Troupe ships ranked group voting and we have not tested it.

The Six Screens On Her Phone

Six of the nine screens, the ones she meets on a phone. The Desk, The Book and the Manual are built for a wider screen and follow at full size.

Move One Stop, And The Day Tells You How Much Slower It Got

She drags a stop out of its cluster on purpose. Day 1 turns gold, and the reason is written beside it.

FITS

Every stop fits its opening hours, and the day’s travel plus dwell fits 09:00 to 21:00.

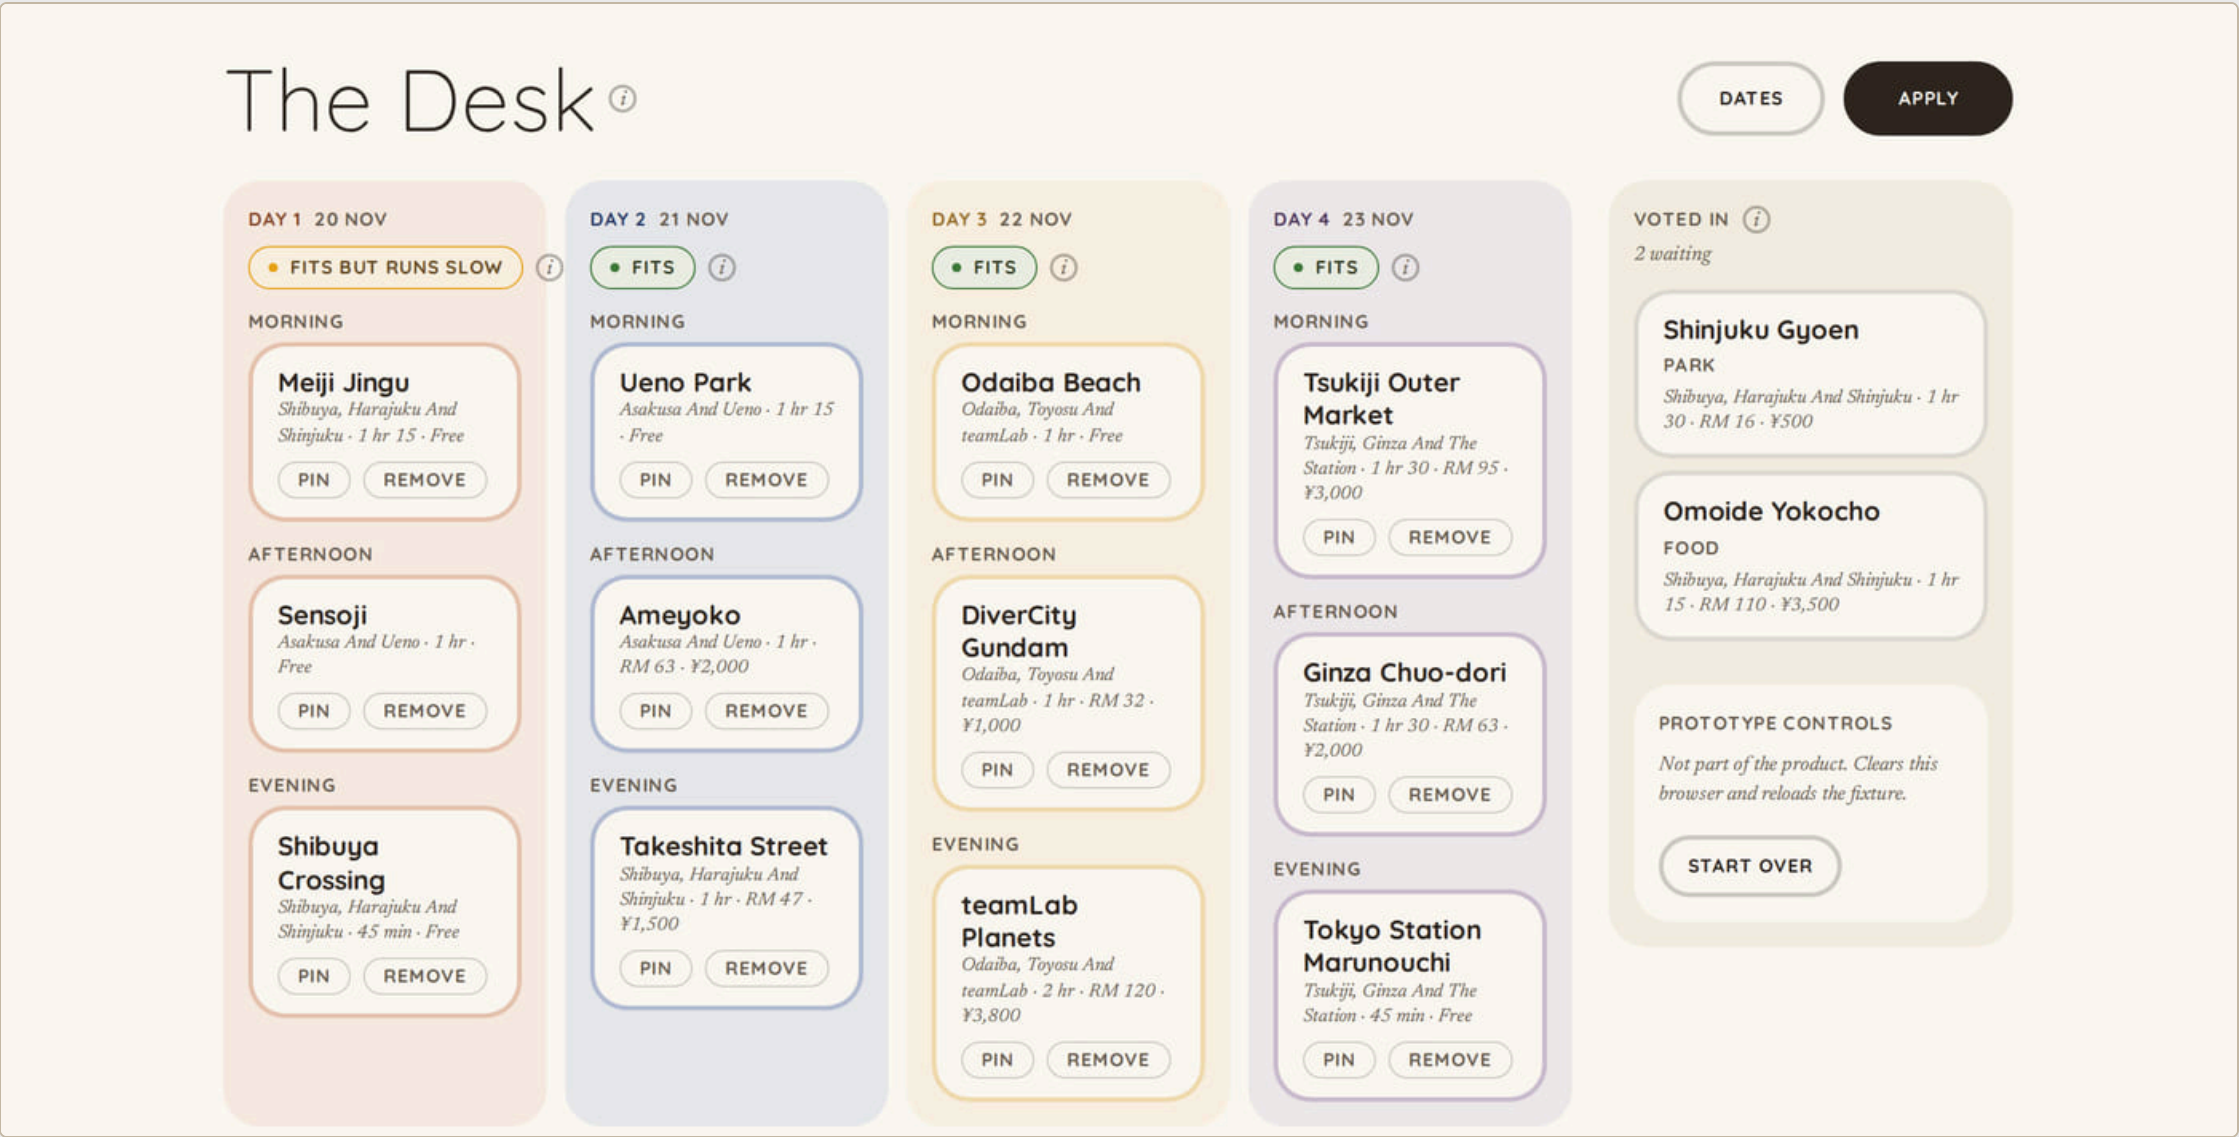

FITS BUT RUNS SLOW

It still fits, but the order runs more than 25 percent slower than the route the scheduler would have chosen.

OVERRUNS

A stop is outside its opening hours, or the day runs past 21:00.

Cluster by area, order by best period and opening hours, nearest neighbour within the day. No model and no black box: the colour is the whole explanation.

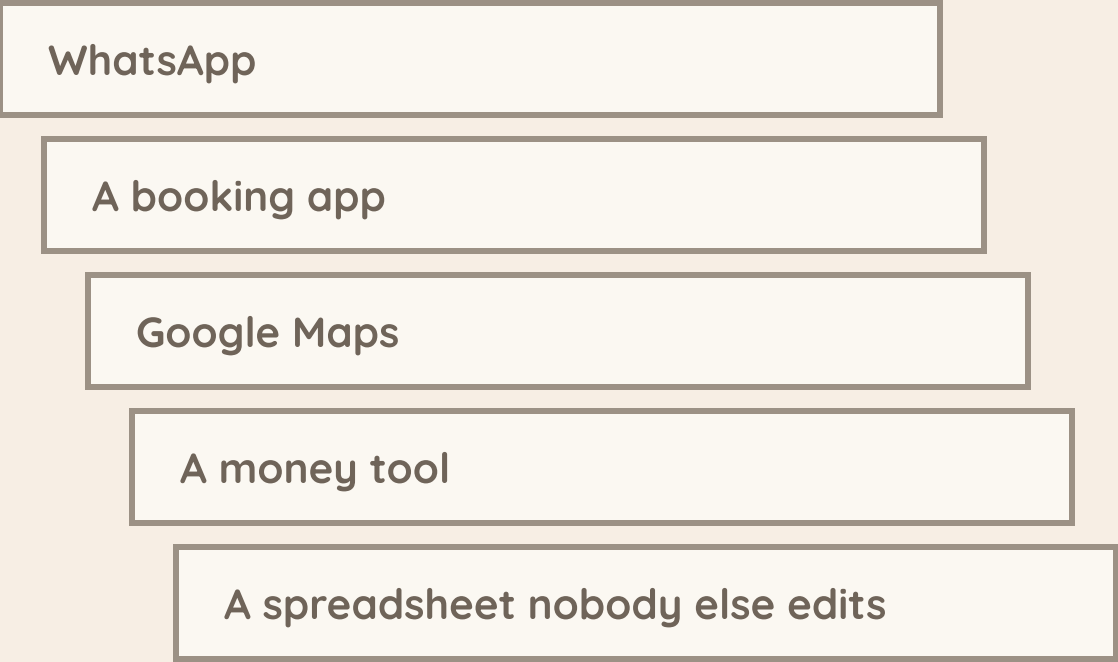

THE DESK, 20 TO 23 NOVEMBER, FOUR DAYS BY THREE SLOTS

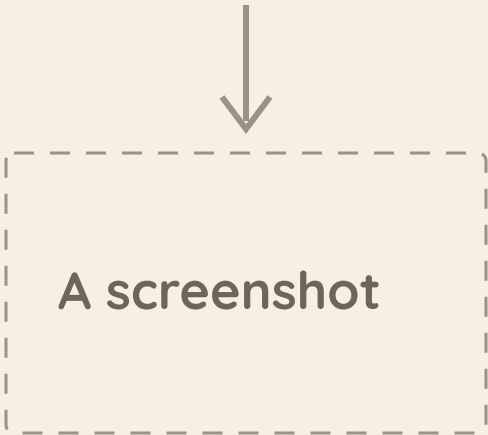

It does not undo her drag. It turns the day gold and says the order got 25 percent slower.

Today It Ends As A Screenshot. Here It Ends As A Printed Schedule.

TODAY, IN THE ORDER SHE REACHES FOR THEM

*Free, already installed, and socially default.
Three hundred messages and a poll nobody tallies.*

*It cannot be reordered,
costed or printed.*

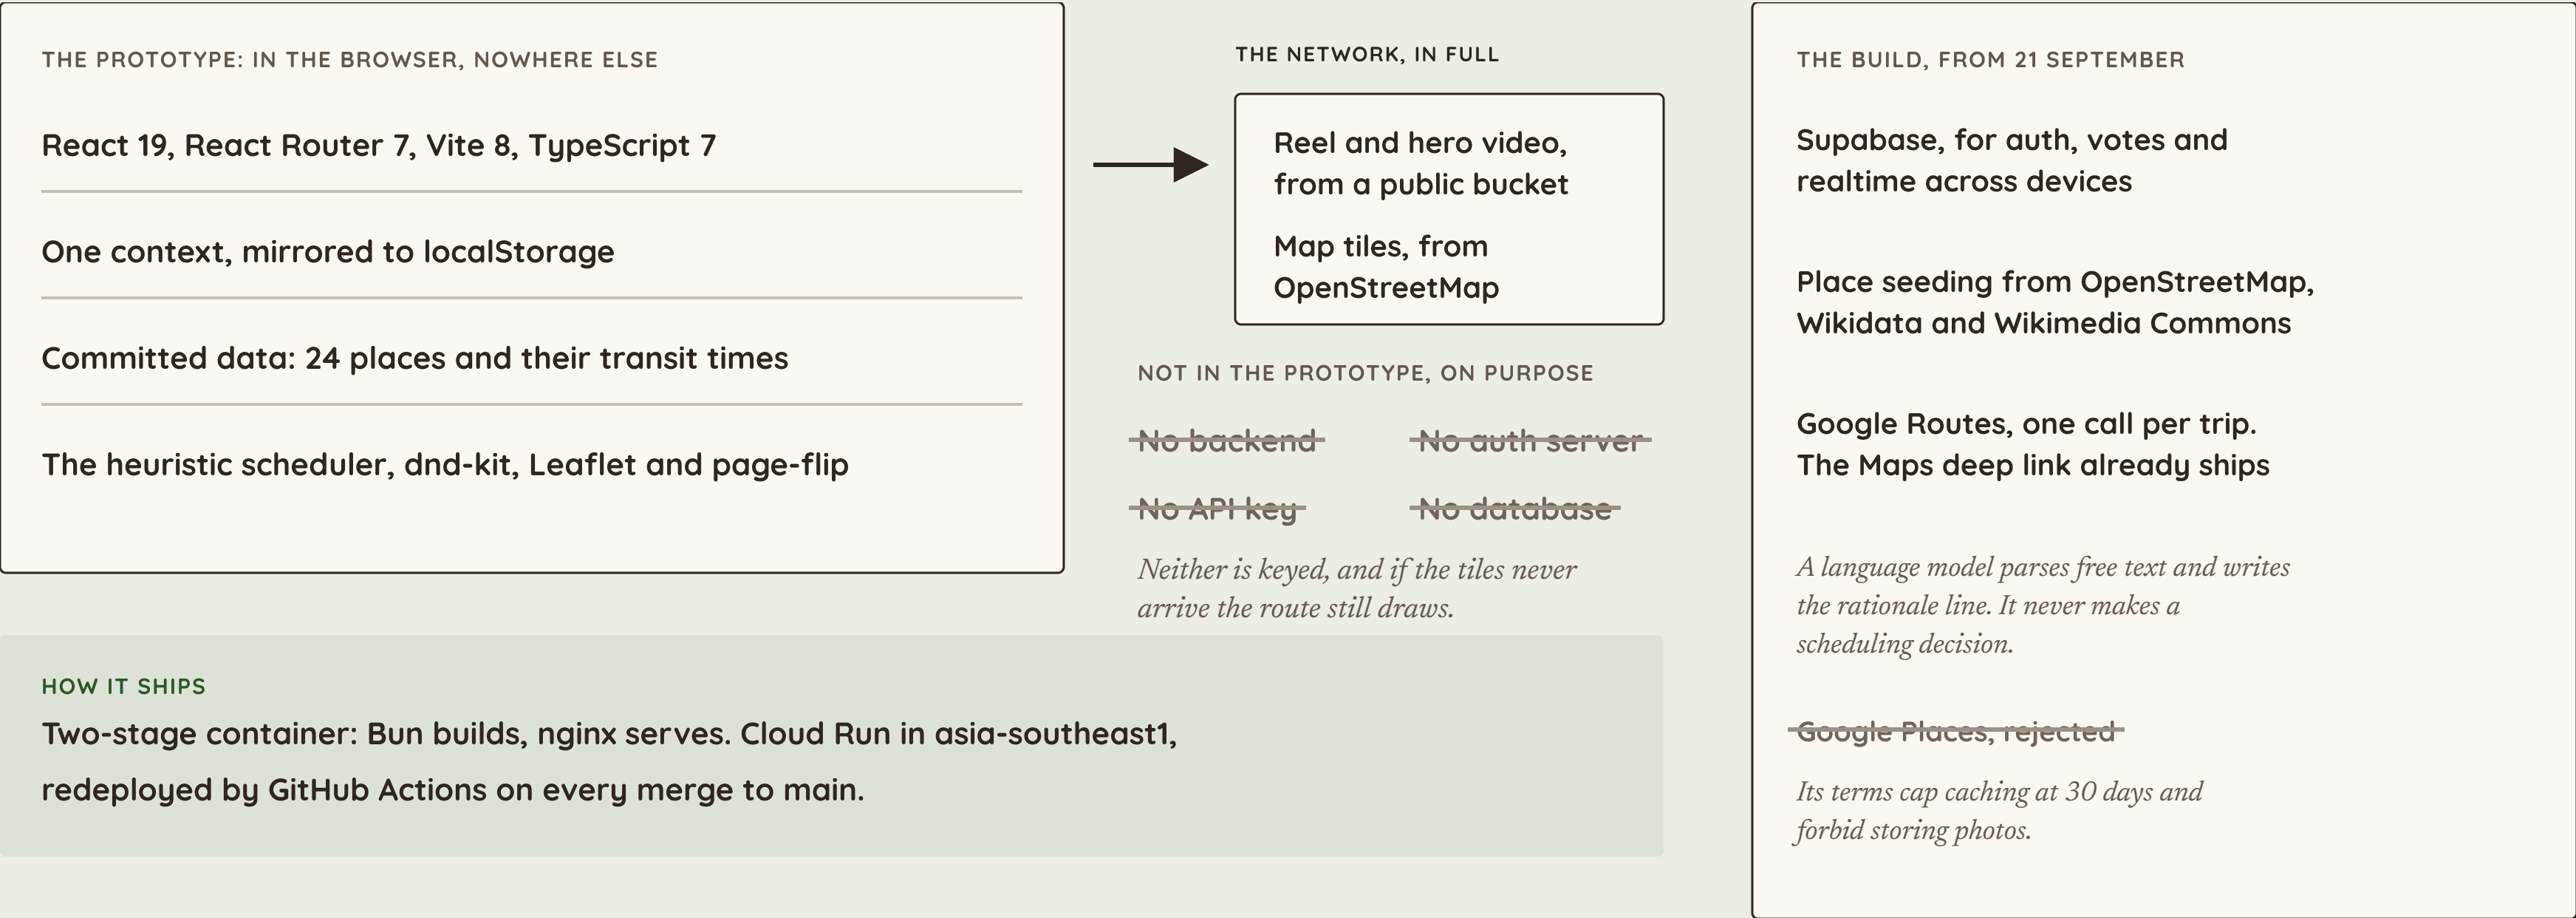

WITH PERCH, AFTER TWO MINUTES OF SWIPING

One page per day, drawing that day's real route, with a transit link under each. This is what goes back into the group chat.

The prototype runs on nothing. The build adds four services.

Every service is one more way to fail on stage, so the prototype has none. Each one the build adds is named below with the constraint we expect from it.

Three Weeks, Then Scope Freezes

Deployment is bug fixes only, so week three is the last week we add anything.

THE THREE BUILD WEEKS, IN ORDER

WEEK 1

Supabase replaces that data for auth and votes

WEEK 2

Seeded place data, behind exactly the same shape

WEEK 3

The Routes call, and the one-line rationale per day

WHAT THE BUILD PHASE WILL NOT BUILD

Multi-area Japan beyond the legs type

Native apps

Any screen beyond the nine we already have

The Interview and the old Desk were deleted, not kept behind a flag.

WHAT WE HAVE TO SPEND

Four members, three weeks, one toolchain

Cloud Run scales to zero, so hosting is free

Supabase and the place sources are free tier

A new city is a data seed against the same shape, not a rebuild.

Six Claims **We Are Not Making**

Six things we do not claim. The fastest way to sound like every other planner is to claim everything.

~~Better suggestions~~

Tripadvisor has a billion reviews. Roadtrippers has 42 million trips.

~~Clever routing~~

It is the Tourist Trip Design Problem, with a literature. Ours is a heuristic.

~~That generating an itinerary is hard~~

Chatbots commoditised it. It is not ours to claim.

~~Novel group voting~~

WhatsApp ships polls. Tripeza, SwipeSights and Plan Harmony all vote.

~~A new layout~~

“Your itinerary and your map in one view” is Wanderlog’s own tagline.

~~Photo spots as our territory~~

Locationscout has 233,000 of them.

● THE HONEST GAP, AND IT IS NOT SMALL

The interviews folder is empty. No real person has said any of this, and every claim about the user is marked assumed at its source.

Getting everyone to agree is the easy part. Nobody plans the trip after.

Perch does. The group swipes for two minutes, and the trip prints.

● Swipe the deck

● Drag the desk

● Print the book
