

CODENECTION 2026, PROTOTYPE PHASE

Swipe The Deck. Drag
The Desk. Print The Book.

TOLONGLABS / TRACK 1, LIFESTYLE AND PERSONAL PRODUCTIVITY

THE PROBLEM

Four Causes. Three Are Already Solved.

We are not competing with a travel planner. We are competing with the free apps she already has.

WHO IT IS FOR

One Person Carries The Whole Trip

Every claim about her is marked assumed in the notebook, and none of it comes from an interview.

WHAT SHE CARRIES TODAY

- Reading the whole chat
- Deciding for everyone
- Chasing four people
- Fronting the deposit

Aisyah, 24

Junior job in KL, no car
Tokyo, four days, three nights

WHAT THEY CARRY

Nothing, which is the problem. No stake means no reply.

Farah Hana Iman
Different jobs, different shifts. They install nothing.

WHO WE ARE DELIBERATELY NOT BUILDING FOR

~~“Students”, as a category~~

~~Families with young children~~

~~Backpackers with weeks of slack~~

IDEATION, 6 SEPTEMBER

Six Days Of Ideation, Drawn

What we claimed, what got built,
three competitor scans, the
branches we dropped, and the
marks still unclaimed.

DETAIL, THE KEY

How to read this

Red is a question still open. **Cyan** is a live branch. **Green** is what survived pressure and is the claim today. **Yellow** is a cost or a caveat. **Purple, struck through**, is a branch we dropped - kept on purpose, because dead ends are scored twice here.

The **edge labels** are the argument. An arrow with no label says only "these are related", which the reader already assumed.

Drag anything. Delete nothing.

Drawn on 6 September, before the rebuild, and kept as drawn. The source is an Obsidian Canvas in research/diagrams/, regenerated rather than redrawn.

Every colour on the map means something, and the struck-through branches are the ones we dropped.

What A Group Actually Does

Stage zero to stage eight, and the loop back from a broken plan to a re-derived one.

Drawn on 6 September, before the rebuild. Kept exactly as drawn: it records how the thinking moved, and it is not a picture of today’s product.

Thirteen Directions. Two Survived.

Every one is dated, and every one names what killed it. Nothing was deleted.

THE DIRECTION

Split planning, members claim days

Map-first planner, round-trip decision

Group voting as the originality claim

All-in-one platform as the argument

Photo spots as a feature

One book in two states

A chat panel for planning

The self-repairing itinerary

The interview instead of a form

Bill splitting

A mascot copilot

The trip as a book, read-only

Swipe on reels, drag what won

WHAT KILLED IT, IN THE NOTEBOOK’S OWN WORDS

Built and working. It distributes the work, it does not remove it

Contour and calimoto already ship the loop

Tripeza, SwipeSights and Plan Harmony all ship it

The incumbents own breadth, and thin pages cost more than they gain

Locationscout has 233,000 of them. It is a whole product category

Built and working. A flipbook cannot host voting, and it demoed better

Conversational planning is the one comparison we lose

Chosen 4 Sept. It needed a disruption fired by hand and a bench nobody voted for

“I have to click a lot and I have to know what I want”

The arithmetic is fine. The collection is the problem

It makes the plan feel authored, when its whole value is that it is derived

A keepsake has to be a finished thing. The Book is printed state only

The group’s decision reaches a printed book untouched

HOW LONG IT STAYED LIVE

● Filled green, and still live on 8 September. Both of them are in the prototype.

Two We Built, Then Killed

Both worked when they were dropped. One of them demoed better than the thing that replaced it.

DROPPED 2 SEPTEMBER, WHILE IT WAS BUILT AND WORKING

~~Split Planning~~

“do you think this feature is needed since we are a trip planner we should have done everything”

JIN SIANG, MID-BUILD

WHY IT DIED

Splitting the work between four people does not remove the work, it distributes it.

WHAT IT COST US

One of only two genuinely novel things in the idea. Taken deliberately, not stumbled into.

DROPPED 6 SEPTEMBER, WHILE IT WAS BUILT AND WORKING

~~One Book In Two States~~

“It demoed better and still lost.”

THE NOTEBOOK, RESEARCH/DECISIONS/DROPPED.MD

WHY IT DIED

A flipbook is built for reading. Hosting vote widgets inside one fights the format.

WHAT SURVIVED IT

The bench slides up when a card is removed. It is the Perch drawer now.

One Session. Four Things Changed.

“All these features right, like one to six, is stuff that people will already build.”

ZACH KHONG, FULL STACK ENGINEER AT SOLANA FOUNDATION
38 MINUTES, TRANSCRIBED VERBATIM WITH TIMESTAMPS

TEAMS HE MENTORED, AND WHAT THEY WERE BUILDING

Nine of twelve were building a travel planner.
Ours was one of them.

“the way that how you represent the voting feature is what would make your app special”

WHAT HE SAID

“actively thinking is harder than just deciding yes or no”

~~A ranked interview~~

WHAT CHANGED BECAUSE OF IT

A binary swipe on a reel

“I have to click a lot and I have to know what I want”

~~Forms and choice chips~~

Free text first, chips under it

“I feel like the voting part is a bit stiff”

~~A 50-50 split with no answer~~

The owner’s swipe weighs 1.5

“you could plan to that level of cultural detail”

~~A generic international planner~~

One city, transit modelled

WHAT HE PROPOSED AND WE DID NOT ADOPT

“voting doesn’t have to be yes or no. You could be like, oh, I like this place like maybe 65 percent”

Not built. The binary swipe ships, and the spectrum is the first candidate for the build phase.

A group chat read by a machine, and drawing on a map, are in the transcript too. Neither was adopted.

THE CONCEPT

One Interaction. Three Surfaces.

The group swipes. The owner drags. The only hands the plan passes through are hers.

THE INVITE LINK OPENS HERE. NO ACCOUNT, NO INSTALL

The Ranking Is Spent Twice

A direct competitor had the same ranking in its hands and spent it on a different problem.

SWIPESIGHTS, READ DIRECTLY ON 7 SEPTEMBER

A ranked group preference order

Its own FAQ tells the group to “double-check opening hours closer to your trip date.”

PERCH

The same ranked order

Spent twice, and both spends are visible.

*The tally is the only input to the scheduler.
Nothing else is asked of anyone.*

Where The Field Stops

Three products, and the two free apps that are the real incumbent.

	WANDERLOG	ROADTRIPPERS	SWIPESIGHTS	GOOGLE MAPS AND WHATSAPP	PERCH
Builds an itinerary	☒	☒	☒	☐	☒
Combines group preferences	☐	☐	☒	☒	☒
Keeps the losing preferences	☐	☐	☐	☐	☒
Schedules the votes into routed days	☐	☐	☐	☐	☒
Says in colour whether a day holds	☐	☐	☐	☐	☒
Works with no account and no install	☐	☐	☐	☒	☒

☒ FILLED, IT DOES THIS

☒ HALF, A POLL ONLY

☐ OPEN, IT DOES NOT

☒

THE HONEST RISK
Troupe ships ranked group voting and we have not read it.

Eight Screens. One Path.

Every frame below is the deployed build, opened in incognito. Nothing here is a static mock-up.

THE MOMENT

The Day Says What It Did

She drags a stop out of its cluster on purpose. Day 1 turns gold, and the reason is written beside it.

FITS

Every stop fits its opening hours, and the day’s travel plus dwell fits 09:00 to 21:00.

FITS BUT RUNS SLOW

It still fits, but the order runs more than 25 percent slower than the scheduler’s own.

OVERRUNS

A stop is outside its opening hours, or the day runs past 21:00.

Cluster by area, order by best period and opening hours, nearest neighbour within the day. One describable rule, and the colour is the explanation.

THE DESK, 20 TO 23 NOVEMBER, FOUR DAYS BY THREE SLOTS

Not broken. Slow. The instrument answers back the moment she overrules it, and the call stays hers.

Before, And After

TODAY, IN THE ORDER SHE REACHES FOR THEM

*Free, already installed, and socially default.
Three hundred messages and a poll nobody tallies.*

*It cannot be reordered,
costed or printed.*

WITH PERCH, AFTER TWO MINUTES OF SWIPING

One plate per day, drawing that day's real route, with a transit link under each. This is what goes back into the group chat.

No Backend. No Key. One Network Call.

An unnecessary service is an unnecessary way to fail on stage, so the prototype has none.

Three Weeks, Then Scope Freezes

Deployment is bug fixes only, so week three is the last week scope moves at all.

THE THREE BUILD WEEKS, IN ORDER

WEEK 1

Supabase replaces the fixture for auth and votes

WEEK 2

Seeded place data, behind exactly the same shape

WEEK 3

The Routes call, and the one-line rationale per day

WHAT THE BUILD PHASE WILL NOT BUILD

Multi-area Japan beyond the legs type

Native apps

Any surface outside the nine-route table

The Interview and the old Desk were deleted, not kept behind a flag.

WHAT WE HAVE TO SPEND

Four members, three weeks, one toolchain

Cloud Run scales to zero, so hosting is free

Supabase and the place sources are free tier

A new city is a data seed against the same shape, not a rebuild.

What A Hundred Planners Already Own

Six things we deliberately do not claim, because the fastest way to sound like every other planner is to claim everything.

~~Better suggestions~~

Tripadvisor has a billion reviews. Roadtrippers has 42 million trips.

~~Clever routing~~

It is the Tourist Trip Design Problem, with a literature. Ours is a heuristic.

~~That generating an itinerary is hard~~

Chatbots commoditised it. It is not ours to claim.

~~Novel group voting~~

WhatsApp ships polls. Tripeza, SwipeSights and Plan Harmony all vote.

~~A new layout~~

“Your itinerary and your map in one view” is Wanderlog’s own tagline.

~~Photo spots as our territory~~

Locationscout has 233,000 of them.

● THE HONEST GAP, AND IT IS NOT SMALL

The interviews folder is empty. No real person has said any of this, and every claim about the user is marked assumed at its source.

Every tool a group already uses can produce a plan.

None of them turns the group's decision into days.
